

## US Navy 'Game-Changer': Converting Seawater Into Fuel

By Mathieu Rabechault, April 7, 2014, apf.com

### Seawater-Ruled Battleships

Washington (AFP) - The US Navy believes it has finally worked out the solution to a problem that has intrigued scientists for decades: how to take seawater and use it as fuel.

The development of a liquid hydrocarbon fuel is being hailed as "a game-changer" because it would significantly shorten the supply chain, a weak link that makes any force easier to attack.

The US has a fleet of 15 military oil tankers, and only aircraft carriers and some submarines are equipped with nuclear propulsion.

All other vessels must frequently abandon their mission for a few hours to navigate in parallel with the tanker, a delicate operation, especially in bad weather.

The ultimate goal is to eventually get away from the dependence on oil altogether, which would also mean the navy is no longer hostage to potential shortages of oil or fluctuations in its cost.

Vice Admiral Philip Cullom declared: "It's a huge milestone for us."

Dr. Heather Willauer explains how scientists at the Naval Research Laboratory in Washington, DC can hardly hide her enthusiasm.

"We are in very challenging times where we really do have to think in pretty innovative ways to look at how we create energy, how we value energy and how we consume it.

"We need to challenge the results of the assumptions that are the result of the last six decades of constant access to cheap, unlimited amounts of fuel," added Cullom.

"Basically, we've treated energy like air, something that's always there and that we don't worry about too much. But the reality is that we do have to worry about it."

US experts have found out how to extract carbon dioxide and hydrogen gas from seawater.

Then, using a catalytic converter, they transformed them into a fuel by a gas-to-liquids process. They hope the fuel will not only be able to power ships, but also planes.

This 2 April 2014 US Navy handout image shows a beaker of fuel(right) made from seawater by scienti ...

That means instead of relying on tankers, ships will be able to produce fuel at sea.

- 'Game-changing' technology -

The predicted cost of jet fuel using the technology is in the range of three to six dollars per gallon, say experts at the

US Naval Research Laboratory, who have already flown a model airplane with fuel produced from seawater.

Dr Heather Willauer, an research chemist who has spent nearly a decade on the project, can hardly hide her enthusiasm.

"For the first time, we've been able to develop a technology to get CO2 and hydrogen from seawater simultaneously, that's a big breakthrough," she said, adding that the fuel "doesn't look or smell very different."

A general view of a US Navy ship at the Washington Naval Yard on September 17, 2013 in Washington, DC (AFP Photo/Patrick Smith)

Now that they have demonstrated it can work, the next step is to produce it in industrial quantities. But before that, in partnership with several universities, the experts want to improve the amount of CO2 and hydrogen they can capture.

"We've demonstrated the feasibility, we want to improve the process efficiency," explained Willauer.

Collum is just as excited.

"For us in the military, in the Navy, we have some pretty unusual and different kinds of challenges," he said.

"We don't necessarily go to a gas station to get our fuel, our gas station comes to us in terms of an oiler, a replenishment ship.

"Developing a game-changing technology like this, seawater to fuel, really is something that reinvents a lot of the way we can do business when you think about logistics, readiness.

"A crucial benefit," says Collum, "is that the fuel can be used in the same engines already fitted in ships and aircraft.

"If you don't want to re-engineer every ship, every type of engine, every aircraft, that's why we need what we call drop-in replacement fuels that look, smell and essentially are the same as any kind of petroleum-based fuels."

Drawbacks? Only one, it seems: researchers warn it will be at least a decade before US ships are able to produce their own fuel on board.

## 'Dead' And 'Double' Voting In North Carolina: Mass Voter Fraud Uncovered

By S. Lachance, April 3, 2014, madworldnews.com

North Carolina's Board of Elections has uncovered tens of thousands of instances of potential voter fraud in the 2012 election.

Initial findings from the Board presented to the Joint Legislative Elections Oversight Committee:

- 765 voters with an exact match of first and last name, DOB and last four digits of SSN were registered in N.C. and another state and voted in N.C. and the other state in the 2012 general election.
- 35,750 voters with the same first and last name and DOB were registered in N.C. and another state and voted in both states in the 2012 general election.
- 155,692 voters with the same first and last name, DOB and last four digits of SSN were registered in N.C. and another state – and the latest date of registration or voter activity did not take place within N.C.

Additionally, during an audit of death records from the Department of Health and Human Services, the Board discovered:

- 50,000 new death records that had not previously been provided to the State Board of Elections.
- 13,416 deceased voters on the voter rolls in October 2013.
- 81 deceased voters that had voter activity after they died.

These findings were possible thanks to the Republican-dominated state legislature passing a law last year requiring elections staff to check information for North Carolina's more than 6.5 million voters against a database, called Interstate Crosscheck, which contains information for 101 million voters in 28 states.

Who knows how many more cases there would be if all 50 states participated?

## New Mexico Police Chief Fired Likely Because He Attended Constitutional Rights Gathering

By Warner Todd Hudson, March 30, 2014, rightwingnews.com

New Mexico police chief Shane Harger recently attended an event in Las Vegas held by a group that urges police officials to be mindful of the U.S. Constitution in the execution of their duties. But upon returning home from the convention, Harger was suddenly fired from his job as the chief of Jemez Springs, New Mexico because, he says, he has been called a "terrorist" for believing in the Constitution.

Chief Harger attended the Las Vegas gathering of the Constitutional Sheriffs and Peace Officers Association (CSPOA) to hear what the group had to say about its goals. Harger says he'd never attended such an event in the past and until the Vegas event was not a member of the group.

On the way to the CSPOA event, though, the chief suddenly found that his name had been placed on some sort of watchlist by the Transportation Security Administration (TSA) and he was harassed by TSA agents as he tried to board his plane.

Harger reported that when he got to the airport a man who briefly flashed a badge and claimed to be a "federal agent" (from what agency he would not say) informed the police chief that he was a "person of interest" and that he had to be detained.

The reason given by the TSA for his detention was that Harger was carrying a legally issued driver's license under the name Braxton Haze, a name that Harger said he was using because he had been involved in a "high-profile" investigation that threatened his safety when he was a deputy in Valencia County. So he had his name legally changed during that time period. (He left law enforcement for a time after the 2013 case, but when he was hired by Jemez Springs he was hired under his real name.)

**Want this newspaper delivered to  
your home or business? See  
subscription information on page 2.**

Harger was held for thirty-five minutes and his interrogation was video taped. He was not charged with anything and subsequent attempts to get a copy of the video have been ignored by the federal government.

While at the CSPOA event, Chief Harger signed the Resolution of the Constitutional Sheriffs and Peace Officers Association, a pledge that police officers will, “obey and observe limitations consisting of the enumerated powers as detailed within Article 1 Section 8 of the U S Constitution and the Bill Of Rights.”

When Chief Harger returned home, however, he discovered that Sandoval County, NM Sheriff Douglas C. Wood had intervened with his city, Jemez Springs, and demanded that the city fire the chief and disband the police department.

Sheriff Woods also demanded that Chief Harger surrender his county special deputy commission for “liability and public safety reasons.”

After this story was broken by Sam Bushman of the website Liberty Roundtable, the local newspaper made to “correct” some of the facts of the incident noting that Sheriff Woods did not disband the Jemez Springs department nor fire Chief Harger because, in fact, the Sheriff has no such power to do so.

The paper also stated that the Chief had not been fired. But Harger himself reported that he was brought before a meeting of the town council and told he was fired and that his firing was decided in a closed-door meeting to which he was not a party.

“I have been terminated. I have been fired at council meeting tonight. They let me go with no reason as to why,” Harger told Bushman on February 12.

Still, it appears that the city reversed itself and decided to put him on “desk duty” pending further actions. But even at that Harger told the media that the city demanded that he take away the badges and IDs from his officers.

Harger still insists that his treatment is tied to his association with the CSPOA, but city officials dispute that.

## If the Goal is “Energy Independence,” What Issues Should be a Priority in America?

By Marita Noon, April 7, 2014,  
Executive Director, Energy Makes  
America Great Inc.

Recently the Democratic Congressional Campaign Committee (DCCC) sent out a 2014 Priority Issues Survey” which contained a section on energy.

Section VII, asks: “Which of the following will help America achieve energy independence?”

It offers five options that do little to move America toward energy independence—which isn’t even a realistic goal given the fungible nature of liquid fuels. Additionally, most of the choices given on the DCCC survey actually increase energy costs for all Americans—serving as a hidden tax—but hurt those on the lower end of the socio-economic scale the most. The proposals hurt the very people the party purports to champion.

The survey asks respondents to “check all that apply.”

### Raising gas mileage standards for all new cars and trucks

This choice presumes that making a law requiring something will make it happen. Even the current Corporate Average Fuel Economy (CAFE) Standard of 54.5 miles per gallon (mpg) will be tough to hit.

With the price of gasoline wavering between \$3-4.00 a gallon, most people are very conscious of their fuel expenditures. If it were technologically possible to build a cost-effective truck or SUV that had the size and safety Americans want and that got 54.5 mpg, that manufacturer would have the car-buying public beating a path to its door. Every car company would love to be the one to corner that market—but it is not easy, it probably won’t be possible, and it surely won’t be cheap.

### Develop renewable energy sources

In preparation for writing this column, I posted this question on my Facebook page: If the goal is “energy independence,” what issues should be a priority in America? The first answer posted was: “Smart grid and fast ramp natural gas turbines.” Another offered: “High efficiency appliances and lights. I am a LED FAN!” Yet, another: “Solar, tidal, water.” Bzzzzzzt, all wrong answers.

All of the above suggestions are about electricity. The U.S. is already electricity independent. We have enough coal and uranium under our soil to provide for our electrical needs for the next several centuries. Add to that America’s newfound abundance of natural gas and we are set indefinitely. By the time we might run out of fuel for electricity, new technologies will have been developed based on something totally different, and, I believe, something that no one is even thinking about today.

### Encouraging consumer and industrial conservation

Consumers are already feeling the pinch of higher energy costs—both electricity and liquid fuels. When possible, people are restricting driving by taking a stay-cation rather than a traditional vacation. Many people who can afford the option are switching to more energy-efficient light bulbs.

Most industry is energy intensive. In story about the Ford F-150’s use of aluminum to lower mpg, the WSJ says that the new manufacturing process requires “powerful and electricity-hungry vacuums.” Industry cannot stay in business without profit. Therefore, in interest of preservation, energy conservation is already virtually an instinct.

### Investing in energy efficient technology

When the word “investing” is used in reference to a government document or program, it always means spending taxpayer dollars. In a time of ongoing economic stress, we don’t need to borrow more money to spend it on something of questionable impact on energy independence.

Remember, much of the “efficiency” numbers bandied about refer to electricity, which has nothing to do with energy independence.

### Increasing offshore drilling and oil exploration in wilderness areas

Respondents are discouraged from selecting the one item on the list that could actually lead to “energy independence” by the inclusion of the words “offshore” and “wilderness areas”—as if those are the only places drilling could take place.

Yes, we should increase exploration and drilling—and, while there are risks, it can be and has been done safely in offshore and wilderness areas. But there are vast resources available on federal lands that are either locked up or are under a de facto ban due to the slow-walking of drilling permits.

While the options on the DCCC survey, even if a respondent checked them all, will do little to “help America achieve energy independence,” the survey didn’t include any choices that could really make a difference.

Some selections that would indicate a true desire to see America freed from OPEC’s grip should include:

#### Approving the Keystone pipeline;

#### Revising the Endangered Species Act so that it isn’t used to block American Energy Development;

#### Encouraging the use of Compressed Natural Gas as a transportation fuel in passenger vehicles and commercial trucks;

#### Expediting permitting for exploration and drilling on federal lands;

#### Opening up the Arctic National Wildlife Refuge; and

#### Cutting red tape and duplicative regulations to encourage development.

The fact that not one option that would truly make a difference was included belies the ideology of the Democrat Party. Its goals do not include energy independence. Instead it wants to continue the crony corruption that has become the hallmark of the Obama Administration as evidenced by Secretary of Energy Ernest Moniz’s April 2 announcement that: “the department would probably throw open the door for new applications for renewable energy project loan guarantees during the second quarter of this year.”

The goal shouldn’t really be “energy independence,” instead, it should be energy freedom—the ability to use energy freely without people hostile to America being able to use it as a weapon against us.

## Holder Snaps as Gohmert Hits a Nerve: ‘You Don’t Want to Go There, Buddy’

By Cheryl Carpenter  
Klimek, April 9, 2014,  
bizpacreview.com

U.S. Rep. Louis Gohmert, R-Texas, scolded Attorney General Eric Holder for withholding

documents from Congress, sparking a testy exchange Tuesday during a House Judiciary Committee hearing.

Gohmert told Holder that documents requested in the Holy Land Foundation investigation had not been provided and reminded the attorney general that he had been held in contempt over a similar situation.

This fiery exchange followed, according to video posted on YouTube by Gohmert:

**GOHMERT:** “I realize that contempt is not a big deal to our attorney general, but it is important that we have proper oversight.”

**HOLDER:** “You don’t want to go there, buddy! You don’t want to go there, okay.”

**GOHMERT:** “I don’t want to go there?”

**HOLDER:** “No.”

**GOHMERT:** “About the contempt?”

**HOLDER (pointing his finger at Gohmert):** “You should not assume that that is not a big deal to me. I think that it was inappropriate, I think it was unjust. But never think that that was not a big deal to me. Don’t ever think that.”

**GOHMERT:** “I’m just looking for evidence and normally we’re known by our fruits, and there’s been no indications that it was a big deal because your department still has not been forthcoming in producing the documents that were the subject of the contempt.”

The congressman was referring to the contempt charges that the House brought against Holder in 2012 for failing to provide documents relating to the Fast and Furious gun-running investigation.

## BREAKING: Feds Prep for Waco Style Raid of Bundy Ranch

By Dee, April 9,  
2014,  
teapartyorg.ning.com

In the state of Nevada, Cliven Bundy and his family are currently caught in a fight over land with the Federal

government. This is over his long standing refusal to acknowledge a 1993 modification to grazing rights on the land.

Bundy claims the land has been in his family since the 1800s. On Saturday, hundreds of federal officials, helicopters, low flying aircraft and hired cowboys, began rounding up Bundy’s cattle in northeastern Clark County.

Bundy stated to the media, “I have raised cattle on that land, which is public land for the people of Clark County, all my life. Why I raise cattle there and why I can raise cattle there is because I have preemptive rights... who is the trespasser here? Who is the trespasser on this land? Is the United States trespassing on Clark County, Nevada, land? Or is it Cliven Bundy who is trespassing on Clark County, Nevada, land? Who’s the trespasser?”

More than 100 supporters violated a crudely taped off “First Amendment Area” to rally in support of the Bundy family. They erected two flagpoles with the words “We the People” above a flag which read, “Liberty, Freedom, For God We Stand”. The first amendment area stood empty, with one sign nearby declaring, “1st Amendment is not an area.”

The feds say the move is about enforcing the law and protecting the endangered desert tortoise, but the Bundy family says the spat represents a showdown between big government and American farmers.

The Feds claim that the removal of the cattle from the land will cost taxpayers roughly \$ 3 million.

## Donaldson Bridge Update- An Example Why Our Country is Broke

By APN Staff, March 9, 2014

The Donaldson Bridge in Shady Grove is scheduled for replacement because of its deficiencies. First a little history:

The bridge was built in 1984 to replace a wooden structure that was deemed unsafe. The then county engineer, Peter Haun, of Nolan Blue Associated, was requested on March 1, 1964 to get with the FDOT and report back to the County Commission with any pertinent information.

On March 15, 1984 Haun reported back to the Commission that the bridge was in a bad state of repair and needed to be replaced. The board motioned and unanimously passed to advertise for a new bridge to include the following:

1. "A one-lane, 90 foot, concrete bridge with concrete pilings, with headwalls on the bridge to be cement/sand rip rap, using certified materials and to meet the requirements and/or specifications of the Florida Department of Transportation, Bridge No. H-15;
2. Work to be completed within 60 days from signing of the contract;
3. Contractor to certify the Bridge upon completion;
4. County to furnish test boring information"

At the commission meeting on April 26, 1984, three bids for the bridge replacement were received. "The chairman, Albert Johnson, Jr. appointed Commissioners Rowell, Henry and Projects Coordinator Allen, as a committee to study all bids received and make a recommendation to the Board at the next meeting." Additionally "The Board Unanimously instructed the County Road Department Director (Sheffield), who is a certified bridge inspector, to be the Construction Inspector on this project at all times during this construction, and that the Assistant Road Director handle Road Department matters in the absence of the Director."

On May 1, 1984, the Board awarded the new bridge contract to Echo Enterprises, Inc. of Patterson, Georgia, in the amount of \$33,750.00.

On June 9, 1984, the Board approved an invoice for \$33,750.00 for completion of the bridge.

What is not clear from the available records is how the bridge pilings and endwalls were changed from concrete to wood.

Fast forward to today and we find after reviewing the bridge inspection reports that the main defect of the bridge is rot in the wood pilings. The superstructure from the pilings up is in satisfactory condition.

Since the bridge has little use (51 cars/day), the residents from the Shady Grove area have petitioned Commissioner Feagle to work with the FDOT to repair the existing bridge no matter how extensive these repairs may be. The original bridge contractor gave APN an informal quote of \$350,000 for total replacement of the bridge (now with heavier H-20 loading and concrete piles/caps), which has a FDOT approval. Also he said the BFI report will cost an additional \$25,000 to \$30,000. Common sense would seem to indicate that no matter how extensive the **repairs**, they would be less expensive than a new bridge..

Here is the deal. The DOT wants to replace the bridge at an estimated cost of 3.53 million dollars. You, the taxpayers, get to foot the bill or at least the obligation because the Federal Government is broke. Citizens are demanding that our County Commissioners do whatever necessary to return approximately 3 million dollars to the taxpayers. As was stated in a Commission meeting last month, make the headlines read "County Returns 3 Million dollars to Taxpayers" and if the DOT won't return the monies, add "FDOT Refuses to do The Same". Yes, the \$0.50 loaf of bread in 1984 is more like \$2.50 today, but by the government's math it would cost \$50.00.

Your next opportunity to speak on this issue will be April 22<sup>nd</sup> at the County Commission Meeting, 6:00 PM, where the issue will be discussed with FDOT. Demand answers. Will you be part of the solution? All appearances are that they are spending the engineering monies as fast as possible so that they won't have to return any to you.

## Common Law Grand Juries Now Constituted in All of Florida's 67 Counties

**Power of the Grand Jury** - In a stunning 6 to 3 decision Justice Antonin Scalia, writing for the majority, confirmed that the American grand jury is neither part of the judicial, executive nor legislative branches of government, but instead belongs to the people. It is in effect a fourth branch of government "governed" and administered to directly by and on behalf of the American people, and its authority emanates from the Bill of Rights, **see United States -v- Williams.**

## The Global Recording Initiative: Yes, Your Grocery Store is Forcing You Into Agenda 21

B Gretchen Olson, April 5, 2014, canadafree press.com

### UN building a web of human control unprecedented in recorded history

Agenda 21, the United Nation's open plan for global sustainability, is widely understood to be voluntary. Critics of the scheme, however, insist the UN is engaging in double-speak, and that this so-called "volunteer" status is actually creating a world government through the interlinking of UN bureaucracies and international corporations.

Taylor County Commission Meeting  
April 22, 2014, Board Meeting, 6:00 PM  
April 29, 2014, Board Workshop, 6:00 PM  
May 5, 2014, Board Meeting, 6:00 PM  
Perry City Council Meeting  
April 22, 2014, 5:30 PM  
May 13, 2014, 5:30 PM  
Taylor County School Board  
April 15, 2014 Board Meeting, 5:00 PM  
April 25, 2014 Board Meeting, 6:00 PM

It appears now they may be right, this time involving a place most households in the Western world cannot avoid, the grocery store.

As it turns out, every item scanned at Wal-Mart, America's top food reseller with an estimated 25% of market share, supports Agenda 21 through a little known organization called the Global Recording Initiative. The GRI, according to its website, is a non-profit entity which "promotes the use of sustainability reporting as a way for organizations to become more sustainable and contribute to sustainable development." Wal-Mart is one of the growing number of corporations who attach to the registry, "voluntarily" conforming to the policies of GRI, which is a "collaborating centre" with the United Nations Environment Programme (UNEP).

The GRI functions as an over-the-shoulder manager, one that tracks compliance—through a school-style alphabet grading system—by companies who submit the proper paperwork and commit to managing their firms under the dictates of Agenda 21. UNEP, the executor of Agenda 21, is plain in its expectations and goals for the initiative, saying, "You can't manage what you can't measure."

Wal-Mart, for its part, dedicates eight pages of the corporate website to explaining the company's "global responsibility" values, including an explanation of the "live better" portion of the company's current ad campaign, "Save money. Live better." The phrase, according to Wal-Mart's sustainability page, reflects a strong commitment toward "driving meaningful change in a way that no other company can."

But Wal-Mart's compliance is more than just a shallow public relations tactic. In fact, the economic powerhouse is in full submission to the GRI, promising "progress," "engagement with external stakeholders," and "making corrections as needed." Pointedly, the company has added sustainability standards to what are already considered hard-core demands on suppliers. One mandate, for example, requires that "all direct import suppliers source 95 percent of their production from factories that receive one of our two highest ratings in audits for environmental and social practices." Wal-Mart is only one of thousands of companies bringing its customers into compliance with Agenda 21, most recently promoted as the solution to the now debunked fear of catastrophic man-made climate change. Last year Kroger, in second place for American grocery sales, produced a 69-page sustainability report for the GRI, touting it as "the world's most widely used sustainability reporting framework." (For the sustainability rankings of major global corporations)

Because Agenda 21 is comprehensive in scope, this is only the first wave of the Global Recording Initiative. Currently the Initiative is targeting mid-sized companies and locally-owned concerns around the globe, pushing them to follow the track laid by 95% of world's largest companies, who have already begun self-reporting. According to GRI, "developing countries and Small and Medium Enterprises (SMEs) will be given particular attention in progressing on sustainability reporting." Rural areas are also being brought into the reporting fold, through efforts such as the Sustainable Rural Management project in Spain.

The focus on private enterprise is only one road of many leading toward full implementation of Agenda 21/global sustainability in the past two decades. Much of the progress thus far has been through laws and regulations enacted by governments around the world, including the United States. American citizens became yoked to the plan when President George H.W. Bush enthusiastically assented "by consensus" in 1992 at the United Nations Conference on the Environment and Development in Rio de Janeiro, where it was first publicly unveiled. Recently the Global Recording Initiative and the United Nations Environment Programme (UNEP) boosted the force of national governments with the formation of The Group of Friends of Paragraph 47 [of Agenda 21], made up of heads of state from around the world, where "leading governments join together to commit to corporate sustainability reporting."

Local governments have also been strongly directed to enter the collective through tendrils organizations such as the International Council on Local Environmental Initiatives (ICLEI), which began three years before the Rio conference in an effort to press small municipalities into helping stop ozone depletion. According to his online resume, the founder of ICLEI, Jeb Brugmann, "conceived and led promotion of Local Agenda 21 scaling worldwide through 'national campaigns' led by national associations of local government."

-----Continued on Page 4-----

-----Continued From Page 3-----

Also, a great many well-meaning citizens and local media are being drawn Pied Piper-style into compliance through "Transform" programs, where a trained organizer facilitates public input sessions with the purported purpose to improve communities. Though promoted as grassroots, these efforts do not originate in the targeted cities, nor are participant's comments used. Instead, the meetings are guided via the Delphi technique, creating a "consensus" in line with pre-set goals consistent with "Transforming America Under UN Agenda 21."

Far from a glob of stagnant bureaucracy, in the past 20 years the United Nations has developed a formidable circle of "volunteers," including presidents and prime ministers, CEOs of international corporations, titans of global finance, non-profit entities and religious organizations, state and provincial lawmakers and governors, local players and naïve shoppers. Together they are creating and complying with a system that will measure and manage everything from AC batteries to zombie Nerf guns. And the Global Recording Initiative is bringing them all together "voluntarily" under a dark net of paperwork.

The UN is clear about why it continues building a web of human control unprecedented in recorded history: "An enabling global environment is a necessary condition for the post 2015 agenda to succeed, to set the global community on a course toward a 2030 which is more prosperous, more equitable, more peaceful and more just."

## Florida Constitutional Amendment 1

By APN Staff, April 14, 2014, 2<sup>nd</sup> notice

### Largest land grab in Florida's history.

In an article by James Taylor on September 30, 2013, (mediatrackers.org): "Federal, state and local government already owns 28 percent of the land in Florida, with the majority of government-owned land carrying restrictions preventing development. Nearly every year, the Florida legislature directs that taxes be collected and then spent buying additional land from private citizens and then turning the land over to government. Environmental activist groups seek to make it a Florida constitutional requirement that government officials spend \$10 billion in taxpayer funds during the next 20 years to buy up still more private land and turn it over to government."

So the question remains, "How much land should the government own and control?" Not only do the taxpayers pay for the land, but they have to make up for the lost revenue in ad valorem taxes. We recommend all of our readers study this issue carefully before going to vote.

## Republican Organizing Against Conservatives

Republican leadership along with George Soros is holding a fundraiser at Amelia Island in North Florida this Saturday. A news conference was held at the entrance to the Ritz-Carlton, Thursday, April 10, 2014, spearheaded by the Liberty Dwellers of Nassau County. At the news conference it was announced the rally will be held on Saturday from 10:00 AM to 4:00 PM at the rear entrance of the Ritz.

The Republican Mainstreet Partnership PAC event is holding a \$5000 a plate event to benefit the **Soros-supported PAC**. They reportedly are building a war chest to defeat tea party and conservative candidates.

## ObamaCare Signs Up 57.3 Million!

Here's how you write a headline—if you're going to lie, **LIE BIG!!!** No one will bother to prove it wrong, just as there's no way Obama can back up *any* of his numbers. The great benefit to Obama is the 47 million vacuous people in this country who will believe anything that falls out of his mouth, yet if he later denied it with his hand on a Koran, they'd swear George Bush made him do it.

The Affordable Care Act is a loser. Anyone with an IQ to the left of a decimal point knows it. It's not affordable, no bureaucrat cares—okay—the "Act" part is true—it's all an act; to get votes, to redirect a humongous chunk of the tax stream to administration friends, and to further control, enslave, and rob Americans.

Who would possibly think any bureaucracy could manage to do anything other than screw up whatever they try, let alone something as critically important, so inconceivably complicated, and so individually specific, precise, and intimate as the relationship between a patient and their doctor?

The scheme to destroy the greatest economy the world has ever known is simple: first pretend you care, using phrases like, "...for your own good...", "we must do it for the children...", and "...it's your right..." That's how we got Social Security, Medicare, Medicaid, government unions, the income tax, centralized banking, the United Nations, and every other bureaucratic boondoggle the nefarious and the self-delusional have been able to con us into, while using our money to hide their failures.

But ObamaCare is the icing on the bureaucake—the coup de grace, the pinnacle of pinnacles, the ultimate knife in the back. If draining our treasury and driving us into a gutter of debt so deep we have to reach down to touch our roof is not good enough, we have now signed onto the bottomless pit of socialized medicine that fails every time it is tried. Remember Einstein's definition of insanity? Well here we go again—and cross your fingers—this time it just might work!

A thousand years from now, when we recover from the damage done by Common Core, and people learn to read, write, and do simple arithmetic again, stories will begin to emerge about civilization's greatest accomplishment; a nation conceived in liberty, born in free enterprise, and blessed by the right to private property; a nation that became a beacon to people all over the world, who yearned to be free, to achieve on their own merit and reach their greatest potential.

And as the stories spread, people will begin to wonder; how could such a great nation fall? How could just a few generations of Americans destroy such a precious legacy? And why would anyone not see the immeasurable value in nurturing, and protecting, and preserving that great nation for all time?

The answer is simple: we let it slip away, an inch at a time, as we turned a deaf ear to every warning, and told ourselves, "Someone ought to do something".

Dixie Patriot

## Marinated Salad

from *Seasoned With Love*

1 head broccoli  
1 head cauliflower  
1 pt. cherry tomatoes, cut in half  
1 can pitted black olives, sliced  
1 c. sm. pearl onions, sliced to rings  
1 lg. bottle Zesty Italian dressing

Cut broccoli and cauliflower florets. Mix all ingredients and marinate overnight.

## Armed Govt. Siege of Bundy Ranch Rapidly Escalating Into America's Tiananmen Square Showdown

By Mike Adams, April 11, 2014, naturalnews.com

In 1989, members of China's Democracy Movement staged a massive protest in Tiananmen Square. In response, the communist Chinese

government commanded near-total control over the nation's media while dispatching heavily armed soldiers and tanks to surround and intimidate the protesters.

Today, the U.S. government has dispatched hundreds of heavily armed soldiers, snipers and helicopters to lay siege to a ranch near Bunkerville, Nevada, called the "Bundy Ranch," where the Bundy family has been running cattle since the 1870's. In 1949, the federal Bureau of Land Management was created, and in the 1990's the BLM claimed (false) authority to start charging "grazing fees" for Bundy's cattle. Today, the BLM claims the Bundy family owes over \$1 million to the government.

### Feds engage in Chinese-style brutality and violence

In order to collect that \$1 million and lay seige to the land the Bundy family has been using for generations, the BLM is engaged in the very same kind of brutality and threat of violence that the Chinese government used against its protesters in 1989. In fact, similarities between the two are numerous.

- **The mainstream media now functions as a total government mouthpiece**, broadcasting lies and propaganda such as the false claim that "a protester kicked one of the BLM's security dogs." (In fact, a BLM officer verbally commanded the dog to attack the protesters.) This is similar to the Chinese government directly controlling virtually the entire Chinese press.

- **The massive show of unjustified force is being used**, such as positioning government snipers on hilltops around the Bundy ranch, with line-of-sight inside the Bundy home so that shots can be taken to kill the Bundy family.

- **The deployment of absurd "overkill" hardware:** Tanks in the case of China, and government helicopters in the case of the Bundy ranch in Nevada. It has also been reported by Pete Santilli and Adam Kokesh that BLM has hired Blackwater-style operatives to don BLM badges and wade into the scene as soldiers for hire.

- **The intimidation and silencing of local law enforcement is being used.** In the case of the Bundy ranch in Nevada, the local Sheriff of Clark County has the **constitutional authority** to arrest all BLM personnel for felony theft of cattle and trespassing. Yet he has been intimidated into silence, thereby abandoning his own constituents. In China, officials who were friendly to the protesters were demoted, purged or kidnapped and killed by the Chinese government.

- The Chinese government declared Martial Law and arrested anyone they wished. Similarly **in Nevada, the BLM has declared a state of effective Martial Law by threatening to arrest anyone who sets foot on the desert dirt. The BLM also set up a "First Amendment Zone" and threatened to arrest anyone who strayed outside the zone who wished to express their First Amendment rights.** Dave Bundy, son of Cliven Bundy, was brutalized and arrested for taking photographs on a public highway.
